"Procedural recoil" is the approved term. Events formerly described in Deviant vocabulary are procedural recoils. There is no other thing, and it does not have a name.

NOTICES.

- Filing a PX-1 is not an admission of fault. Fault is determined separately, by Evaluation Review under the NEI framework, using this form.
- Procedural recoil is a documented statistical phenomenon and is not evidence of any deficiency in the scientific model. The model is complete. Recoil is the environment failing to keep up, and the environment has been notified.

3. Three PX-1 filings in one quarter trigger an automatic wellness conversation, which personnel consistently describe afterward as clarifying.
4. Entities reported at item 16f will be processed through the appropriate channel. Do not accommodate them in the interim. Courtesy is a channel.
5. Personnel checking item 16h should complete this form anyway. If the form is not accepted at intake, the intake you attended was part of item 16h; proceed to actual intake.
6. Injuries arising from a recoil are claimed on Form UH-7, item 17j, which requires one PX-1 per flaw manifested. This is that form. You are holding it. Everything is proceeding normally.
7. The Union thanks you for keeping those numbers low. Damian 5 is a ceiling, not a goal.
